

WHAT IS FENTANYL?

Fentanyl is a Potent Synthetic Opioid

- **Potent**: More than 50 times stronger than heroin and 100 times stronger than morphine.

A FEW GRAINS CAN BE LETHAL

- **Synthetic**: Man made in a lab, not plant based.
- **Schedule II Opioid**: Pain reliever like oxycodone, morphine, and heroin, used in the medical field but abused inside and outside.

Fentanyl is often added to pills like Oxycodone and is found in colorful pills and pressed powder that resembles sidewalk chalk. It's being called Rainbow Fentanyl.

Fentanyl is involved in more American youth drug deaths than heroin, meth, cocaine, benzos, and Rx drugs COMBINED.

Illegally made fentanyl is the primary cause for the increase in all U.S. overdose deaths.

Fentanyl-involved deaths are fastest growing among 14-23 year old's.
